EXPERIENCE

Shyro Health

Bangalore, India

Software Development Engineer II

Nov 2024 – Present

- Led a team of **5 engineers**; architected an event-driven backend on **RabbitMQ** from scratch and shipped **15+ service modules** (clinical notes, booking, video calls, assessments, journaling, notifications), serving **5,000+ members**, **30+ therapists**, and **1,000+ appointments/month**.
- Implemented technical controls for **HIPAA**, **GDPR**, **DPDP**, **SOC 2**, and **ISO 27001** compliance, including encryption at rest and in transit, audit logging, and least-privilege access.
- Designed a PII data vault service that encrypts and tokenizes all PII and PHI for **5,000+ members (30,000+ fields)**, isolating sensitive data from application services.
- Engineered a multilingual AI post-session pipeline (**English + 7 Indian languages**) that transcribes 1-hour therapy sessions, **redacts PII** before LLM processing, and generates clinical notes in **under 3 minutes** with **98% clinician acceptance**.
- Shipped an AI therapy chat agent on **LangGraph** and **MongoDB (500+ conversations)** with real-time crisis detection and live therapist escalation; across **20+ crisis escalations**, a therapist was alerted **within 5 seconds** every time.
- Launched a personalization engine deriving user personas from **30+ behavioral signals** (journaling, assessments, AI chat, content), increasing **DAU by 35%**.
- Developed an event ingestion service in **Go** handling **1M+ requests/day** with peaks of **500 req/s** at **15ms P99**.

Ninjacart

Bangalore, India

Software Development Engineer II

Apr 2024 – Oct 2024

- Engineered an inventory management system with invoicing, GST IRN integration, and credit/debit notes, using hexagonal architecture and event-driven design.

Software Development Engineer I

Apr 2023 – Apr 2024

- Built a promotional pricing engine driving **80% of daily orders**, handling up to **5,000 orders/min** at **200ms P99**.
- Led ONDC integration with Paytm, Pincode, and Magicpin, serving **250,000+ buyers** and **2,000+ sellers**; secured production sign-off with 100% partner compatibility.
- Implemented the inbox/outbox pattern to sync orders from MySQL to Elasticsearch, enabling near real-time order search with reliable, eventually consistent sync and no lost updates.
- Set up observability (Grafana, Micrometer, OTLP) with custom exception tracking; added RBAC and maker-checker workflow to payment settlement.

Software Development Engineer

Feb 2022 – Mar 2023

- Designed an in-house federated commerce protocol for search fan-out, order relay, inventory sync, and multi-tenancy.
- Redesigned the catalog schema for **1M+ entries** with Apicurio schema registry; built Elasticsearch discovery APIs, cutting response times by **60%**.
- Built a grievance management dashboard tracking **5,000+ grievances/month**, reducing resolution time by **80%**.

TECHNICAL SKILLS

Languages: Java, Go, Python, JavaScript, SQL

Backend: Spring Boot, FastAPI, Kafka, RabbitMQ, Redis, Elasticsearch, GraphQL

Data & Infra: PostgreSQL, MySQL, MongoDB, AWS, GCP, Docker, Linux, Git

Observability: Grafana, Prometheus, OpenTelemetry

AI/LLM: RAG, LangGraph, LLM pipelines, speech-to-text transcription

EDUCATION

Ramaiah University of Applied Sciences

Bangalore, India

B.Tech, Computer Science & Engineering – CGPA: 9.1

Aug 2018 – May 2022
